Claim 1; Page 57-62; 133pp; English.

CONNS (702946-49) coding for 4 novel human EPH-like receptor protein tyrosine kinases, HEK5, HEK7, HEK8 and HEK1 (R85089-92), respectively were isolated from a human foetal brain cDNA library using a directed PCR approach with primers (see 702960-61) based on conserved regions creceptor PTKs and EPH-like receptor PTKs. HEK5, HEK7 and HEK8 show extensive homology to the catalytic domain of chicken EPH-like receptors. The isolated cDNAs are used for prodn. of recombinant HEKS and chimeric receptors, in hybridisation assays, and
                                                                                                                                                                                                                                                     12-OCT-1995.

On Nov 15, 1999 this sequence version replaced gi:6114770.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence has been finished according to sequence map criteria as follows. An attempt is made to resolve all sequencing problems, such as compressions and repeats but not necessarily within known annotated human repeat sequence elements (e.g. Alu). Where the feature by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Mp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chrl
RP1-61A9 is from the library RPC1-1 constructed at the Roswell Park Cancer Institute by the group of Pleter de Jong. For further details see http://bacpac.med.buffalo.edu/

On Feb 16, 2000 this sequence version replaced gi:006105.
IMPORTANT: This sequence is unfinished and does not necessarily
represent the correct sequence. Work on the sequence is in progress
and the release of this data is based on the understanding that the
sequence may change as work continues. The sequence may be
contaminated with foreign sequence from E.coli, yeast, vector,
phage etc. Order of seqments is not known; 800 n's separate
segments. Unfinished: dJ189K14 Contig_ID: 00235

Soares Lab Clone distribution: NIH BMAP cDNA clones will be made
available by the means that is soon to be determined. When NIH
determines the means for distribution of the BMAP cDNA clones, this
record will be updated accordingly when that means is determined.

polylinker; Site_1: Not I; Site_2: Ecc RI; The
NIH_BMAP_M_S1 library is a subtracted library derived from
NIH_BMAP_M_S1 which in turn is a subtracted library
derived from a mixture of normalized libraries from ten
regions of the mouse brain (cerebellum, brain stems,
olfactory bulbs, hypothalamus, cortex, amygdala, basal
ganglia, pineal gland, striatum, hipoccampus). The driver
used for subtraction consisted of a pool of 5,000 clones
from the NIH_BMAP_M_S1 library and a pool of 2,000 clones
obtained from non-normalized and normalized mouse brain
spinal cord libraries.

PATENT NO. 5674691

GENERAL INFORMATION:
APPLICANT: Boyd, Andrew W.
APPLICANT: Wicks, Ian
CORRESPONDENCE ADDRESS:
ADDRESSEE: Scully, Scott, Murphy & Presser
STREET: 400 Garden City Plaza
CITY: Garden City
STATE: New York
COUNTRY: U.S.A.
ZIP: 11530
COMPUTER READABLE FORM:
MEDIOM TYPE: Floppy disk
COMPUTER: IBN PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARR: Patentin Release #1.0, Version #1.25
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/167,919A
FILING DATE: 12-DEC-1991
PRIOR APPLICATION DATA:
APPLICATION NUMBER: PK8841 (AU)
FILING DATE: 12-DEC-1991
PRIOR APPLICATION NUMBER: PK8841 (AU)
FILING DATE: 12-DEC-1991
